

Thanks for buying the George Lynch Tripler by Morley

This device is designed to route a single guitar signal to three output sources. Two most common uses for the Tripler are routing one guitar to three amps OR routing one guitar to two amps and a tuner.

Each channel is turned on/off via a footswitch for that channel. Each channel has an LED indicator that lights when that channel is selected.

The boost knob adds volume to the overall signal of all three outputs. Depending on the guitar, pickups, cables and amps, you may need to increase the boost when using all three amps simultaneously.

The Tripler runs off one 9V battery or optional Morley 9V adapter.

This product is warranted for two years from date of purchase. To obtain warranty service, please call Morley customer service at 800-284-5172 ext 14 or email us at info@morleypedals.com

Hooking some amps together may create Ground Loop Hum in one or more of the amps. If this occurs, please check out the Ebtech® Hum X at www.ebtechaudio.com. You can also read more about why Ground Loops occur and how to properly diagnose them.

IMPORTANT NOTE: THIS DEVICE IS INTENDED FOR USE WITH PASSIVE AUDIO SIGNALS, DO NOT USE THIS DEVICE ON POWERED SPEAKER LINES OR YOU WILL DAMAGE THE AMP AND/OR SPEAKER.

This product is proudly made in the U.S.A.
