MULTI KEYBOARD SWITCHER - MK-4

The MK-4 is a 4 channel, signal control and indicator device. Each channel consists of 2 input output jacks - (interchangeable) a foot operated push switch and an indicator lamp which comes on when the switch is activated to the channel "ON" position.

The MK-4 may be connected between the output of any signal source and point of ultimate use. Such uses are; rack mounted or midi keyboards, multiple instrumentation, etc. Its output can be connected to the MORLEY SLMC-4 Volume Pedal before going to amplification.

The MK-4 and the SLMC-4 placed under the master keyboard of a rack or midi keyboard system provides the performer with the capability of selecting any combinations or all of the synthesizers by simply depressing the desired foot switches. Full volume control of the mix is then available with SLMC-4.
